

Importing Trimble Data 250/500

1. From the Job Resources Toolbar, select the Read Job Data button. (or you can choose File → Read Job Data. This will bring up the Read Job Data window.
2. Select the (+) or Dbl left-click on Trimble EZ-Guide 250 & 500 from the list on the left. This will reveal -2- options being Application Logs and Memory Drive. Select whether you are reading from a Memory Drive or Application Log from the local drive. The following explains importing an Application Log.
3. Choose the Application Log option.
4. On the right, select the BROWSE button to locate the location of the file(s) to be read.
5. You will need to select the level above the location of the Data folder. See the following diagram:

6. In choosing this location and clicking OK, you will then see the files listed in the window directly below the File Path as per below:

Name	Type	Client	Farm	Field	Start Time	End Time
test	Event	FMD	Varieties	17Jan	1/17/2008 4:...	1/17/2008 4:56:22...

7. Select the log(s) to be imported. Use the SHFT key to select multiple files.
8. Use the boxes in the lower area to select additional options when importing.
9. Click OK and the importing will begin. This will bring up the Linker windows to allow you to link to existing information such as fields, supplies, etc or to setup as New.
10. Once complete, the fields/jobs will be listed in the tree on the left.
